Ener Tchad

COMPANY IN FORMATION · OHADA LAW

Chad exports its crude and imports its fuels. We are reversing this.

EnerTchad S.A. — an integrated oil company built on Chadian capital and talent. Producing, transporting, refining and distributing at home: from source rock to the pump, the value stays in Chad.

3 + 4
core poles · built-in capabilities

100 %
Chadian capital & talent

10 bn
FCFA · target capital

01 · OUR PURPOSE

Fighting energy poverty in Chad.

Too many Chadians face expensive fuel, supply disruptions and territories without reliable energy. EnerTchad intends to push back that insecurity by producing, refining and distributing energy at home, at the regulated ARSAT price, down to the last kilometre.

02 · THE INTEGRATED CHAIN

One company, the whole chain.

Upstream
Exploration & production · enhanced oil recovery (EOR) with local inputs · oilfield services

Midstream
Transport · Doba–Kribi corridor (≈1,070 km) · strategic storage

Downstream
Modular mini-refineries 500–2,000 b/d · Tchadium network · ARSAT distribution

Petrochemicals
Local EOR chemistry · derivatives · fertilisers targeted

Every link completed in Chad keeps a margin in the country. A barrel produced, transported, refined and distributed at home is worth more than a barrel exported crude: the economics of integration, applied to the national resource.

Honesty first. EnerTchad is a company in formation: every figure in this brochure is a dated objective, not an operating asset.

03 · THREE CORE POLES, FOUR BUILT-IN CAPABILITIES

How the company is organised.

Three core poles follow the barrel — Upstream, Midstream, Downstream — extended by Petrochemicals; four built-in capabilities serve them all: GreenTech, TchadiTech, EnerConseils, Tchaditude.

Upstream

The E&P core: from seismic to producing well, mature fields and marginal blocks reopened, frugal data-driven EOR.

Midstream

Logistics & corridor: qualified trucking, hub depots, pipeline integrity — the barrel rolls before the pipe.

Downstream

Refine close by, distribute everywhere: 500–2,000 b/d modules, Tchadium stations and Mobile Stations™ deployed in 24–48 h.

Petrochemicals — extending Downstream

Extending the chain: polymers, solvents and EOR inputs formulated from Chadian resources.

GreenTech

Sustainability by design: zero routine flaring targeted, produced water in closed loop, 125 MW solar hybridisation target.

TchadiTech

A digital-native operator: sovereign L1-L4 OT/IT backbone, AI, field robotics, frugal R&D designed in Chad.

EnerConseils

The advisory brand: support for operators and the State, built on the Atlas of Chad's petroleum sector — basins, cadastre, data.

Tchaditude — human capital

"Promote local content and grow skills across the energy trades." Train before extracting: geoscience, drilling, HSE and data tracks, apprenticeships and senior mentoring — 80% Chadian staff targeted. A young nation is an engine for jobs: EnerTchad will act through direct employment and thousands of indirect opportunities across its suppliers.

04 · THE DATED OBJECTIVES

Public, measurable, accountable targets.

TARGET	DETAIL
+8–17 % OOIP	Additional oil targeted on mature fields through enhanced recovery with local inputs (natron, gum arabic, cotton cellulose, neem).
38 blocks	Open blocks targeted for reopening in the Doba and Bongor basins.
500–2,000 b/d	Mini-refinery modules, movable and data-driven, multiplied at the pace of demand.
12 stations	Target Tchadium network, backed by Mobile Stations™ deployable in 24–48 h to landlocked areas.
125 MW	Solar hybridisation & micro-grids targeted for operating sites and their communities.
0 flaring	Associated gas converted to on-site power, by design.
≈1,070 km	Doba–Kribi export corridor: the evacuation infrastructure exists — every additional barrel flows without heavy new investment.
10 bn FCFA	5-year target capital, held by a 100% Chadian shareholder base.

05 · GOVERNANCE

An **OHADA-law société anonyme** in formation. EITI transparency, IFRS accounts and ISO certifications targeted before the first barrel. Independent audit and regular information milestones for shareholders.

06 · INVESTORS

“Each stage funds the next.”

No megaproject: a step-by-step climb, where each raise is conditioned on the results of the previous one.

100 m	≈ 1 bn	10 bn
FCFA · founding capital — studies & licences	FCFA · first raise targeted — kick-starting the works	FCFA · 5-year target — full chain

- **Where the money goes:** studies and licences first, then EOR and modular refining, then network and distribution — in the order that builds cash flow.
- **The value at stake:** sector 1P reserves ≈ 1.5 bnboe (industry data, EnerTchad Atlas), export pipeline running at ~35% — the spare capacity is already paid for.
- **Capital open to all Chadians** — the national oil rent, accessible first to those it concerns.
